Significant synergistic triplets: preimplantation; eight shared signals
10,000 permutations; O-information < 0; BH56 q ≤ 0.05; one original sample per stage
Repressive group: H3K9me3, H3K27me3, H3K36me3
Triplet A: DNA methylation + at least one repressive mark (15 possible)
Triplet B: at least one repressive mark; no DNA methylation (31 possible)
Triplet C: no repressive mark (10 possible)
Zygote (n=1)
2-cell (n=1)
4-cell (n=1)
8-cell (n=1)
