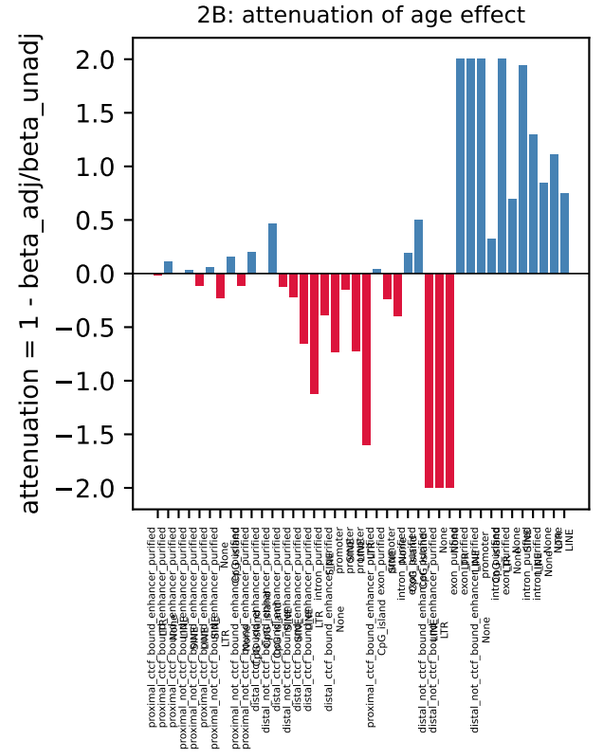
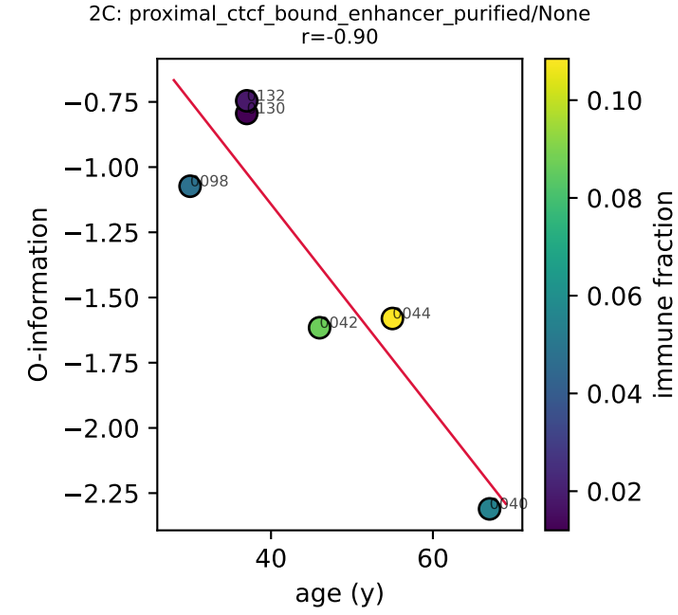
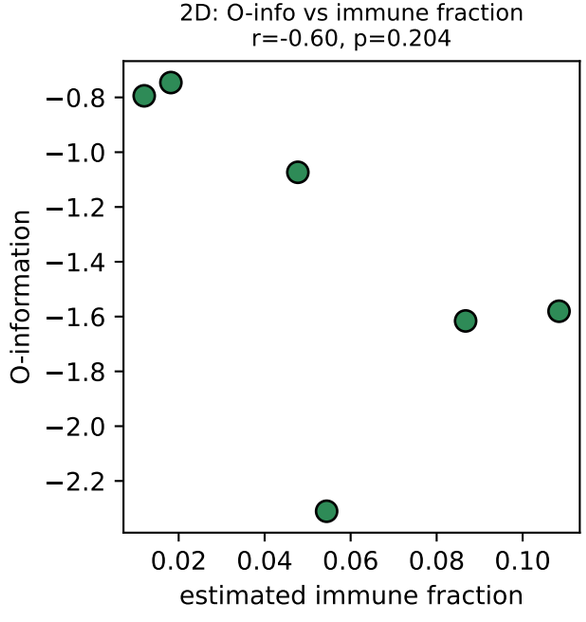
2A: age slope before/after immune adjustment
unadjusted
adjusted
beta_age (O-info / year)



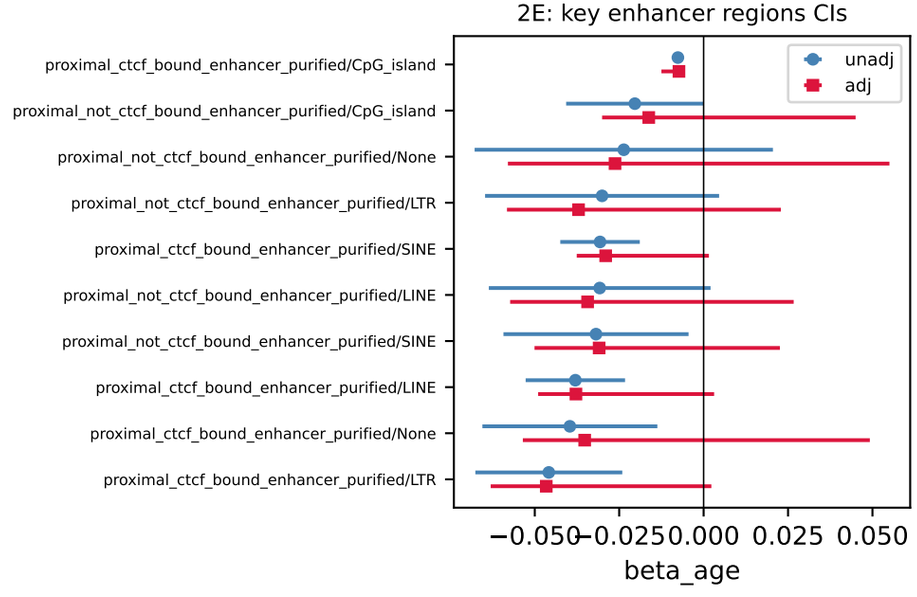
2B: attenuation of age effect
attenuation = 1 - beta_adj/beta_unadj



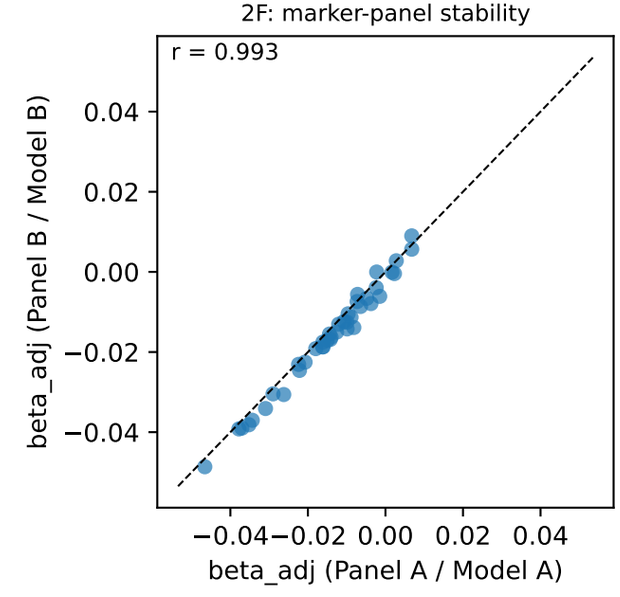
2C: proximal_ctcf_bound_enhancer_purified/None
r=-0.90
O-information
age (y)
immune fraction



2D: O-info vs immune fraction
r=-0.60, p=0.204
O-information
estimated immune fraction



2E: key enhancer regions CIs
unadj
adj
beta_age



2F: marker-panel stability
r = 0.993
beta_adj (Panel B / Model B)
beta_adj (Panel A / Model A)
